

PHASE 2 – REQUIREMENT ANALYSIS

Project: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

1. Purpose

The requirement analysis phase identifies the functional and process requirements needed to implement the automated standard laptop procurement workflow.

2. Functional Requirements

- Provide a Standard Laptop item through the Service Catalog.
- Allow a user to place a Standard Laptop request.
- Process the request through approval.
- Use the Service Catalog process as the workflow trigger.
- Create a Catalog Task automatically after approval.
- Use the Requested Item record when creating the Catalog Task.
- Set the short description to indicate that the laptop needs to be configured.
- Set the description to indicate that the laptop needs to be configured.
- Assign the Catalog Task to the Hardware group.
- Use Approved as the approval condition.
- Allow the created task to be viewed under Catalog Tasks for verification.

3. Process Requirements

- Reduce manual intervention in standard laptop procurement.
- Reduce delays in laptop configuration.
- Improve resource and task allocation.
- Support timely configuration and reduce user waiting time.
- Improve efficiency and productivity in IT procurement operations.

4. Platform and Components

Component	Purpose
ServiceNow	Platform used to implement the procurement workflow
Flow Designer	Used to create the automation flow
Service Catalog	Used to place the Standard Laptop request
Requested Item	Record used as the input for the Catalog

	Task
Catalog Task	Task created for laptop configuration
Hardware Group	Assignment group responsible for configuration

5. Input – Process – Output

Category	Requirement	Expected Result
Input	Standard Laptop request	Request is created
Process	Approval followed by Flow Designer automation	Catalog Task is created
Output	Task assigned to Hardware	Hardware team receives the configuration task

6. Acceptance Criteria

- The Standard Laptop item is available in the Service Catalog.
- The request can be submitted and approved.
- The configured Flow runs after approval.
- A Catalog Task is created automatically.
- The task contains the required configuration description.
- The Assignment Group is Hardware.
- The created Catalog Task can be opened and verified.

7. Conclusion

The requirement analysis defines the requirements for automating the standard laptop procurement workflow. These requirements provide the foundation for the design and development phases.

Suggested evidence: requirement list and screenshots of the Standard Laptop catalog item.
