

PHASE 3 – PROJECT DESIGN

Project: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

1. Design Objective

The project design defines how the Standard Laptop procurement process will be automated in ServiceNow. The design connects the Service Catalog request, approval process, Flow Designer automation, and the Catalog Task assigned to the Hardware group.

2. System Workflow

Stage	Component	Design Description
1	Service Catalog	User selects the Standard Laptop item and places an order.
2	Request	The laptop request is created as a Requested Item.
3	Approval	The request is processed through the approval stage.
4	Trigger	The Flow uses the Service Catalog process as its trigger.
5	Action	The Flow uses Create Catalog Task.
6	Task Details	The task receives the required laptop configuration description.
7	Assignment	The task is assigned to the Hardware group.
8	Verification	The created Catalog Task is checked for

		status and assignment.
--	--	------------------------

3. Flow Configuration Design

- Flow Name: Standard Laptop Task
- Application: Global
- Run As: System User
- Trigger: Service Catalog
- Action: Create Catalog Task
- Request Item: Requested Item Record
- Short Description: Laptop need to Configured
- Description: Laptop need to Configured
- Assignment Group: Hardware
- Approval: Approved

4. Workflow Representation

Standard Laptop Request → Approval → Approved → Flow Designer
 Trigger → Create Catalog Task → Hardware Assignment → Laptop
 Configuration

5. Service Catalog Design

The Standard Laptop service is placed under the Hardware section of the Service Catalog. The user selects Standard Laptop and uses Order Now to place the request.

6. Task Design

The Catalog Task is designed to provide the Hardware team with a clear configuration task after approval. The task contains the laptop configuration description and is assigned to the Hardware group.

7. Design Outcome

The design provides a direct connection between the user's laptop request and the Hardware team's configuration task. This supports the project's goal of reducing manual intervention and improving task allocation.

8. Conclusion

The Project Design phase defines the workflow, trigger, action, task fields, assignment group, and Service Catalog interaction required for the automation.

Suggested evidence: Flow Designer screenshot, Service Catalog Standard Laptop screenshot, and a workflow diagram.
