

PHASE 6 – PROJECT TESTING

Project: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

1. Testing Objective

The testing phase verifies the documented Standard Laptop workflow by following the project process from placing the Service Catalog request through approval and checking the resulting Catalog Task.

2. Test Flow

The documented verification path is: Standard Laptop → Order Now → Request Number → Approvers → Requested Item → Approve → Catalog Tasks → Open task and verify status, short description, and assigned group.

3. Test Cases

Test Case	Test Action	Expected Verification
TC-01	Open Service Catalog → Hardware → Standard Laptop	Standard Laptop item is available for ordering.
TC-02	Click Order Now	A Standard Laptop request is placed and an order status is available.
TC-03	Open the Request Number	The Requested record opens.
TC-04	Open Approvers section	The approval information is available.
TC-05	Open Requested Item and select Approve	The request can be approved as part of the documented workflow.
TC-06	Scroll to Catalog Tasks	The resulting Catalog Task is available for inspection.
TC-07	Open the Catalog Task	Status, short description, and assigned group can be checked.

4. Verification Points

- Verify that the Standard Laptop request is available in the Service Catalog.
- Verify that an Order status and Request Number are available after ordering.

- Verify the approval section of the request.
- Verify that the Requested Item can be approved.
- Verify that a Catalog Task is available after the documented workflow.
- Verify the task status.
- Verify the short description.
- Verify that the assigned group is Hardware.

5. Testing Result Documentation

The project source documents the verification of the created Catalog Task by opening the task and checking its updated status, short description, and assigned group. When preparing the final submission, screenshots of these verification points can be added as evidence of testing.

6. Conclusion

The testing phase provides a structured way to verify the Standard Laptop procurement workflow from request placement and approval through Catalog Task creation and task-detail verification.
